## The Akelius Foundation is now donating the Math Center

Published by: Redaktionen | February 28, 2024

The PISA survey in 2023 showed a large loss of knowledge among students in Sweden.

One in four students left primary school without full grades in 2022.

The Math Center annually creates 35,000 hours of free homework help in mathematics in 22 locations.

The Akelius Foundation is now donating 7.5 million to the Math Center over a three-year period. The donation enables the Math Center's continued work in providing free math support to young people.

"This donation gives us security in forming a long-term effort for children and young people's mathematics skills," says Ellen Eriksson, general secretary at the Math Center.

The Akelius Foundation is a charitable foundation and makes donations for a number of different purposes, above all for education .

The Maths Center is a non-profit association with the aim of supporting children and young people with free mathematics support through physical and digital activities.
